M E E T G O L

MSc IT Student | Full Stack Developer

+91 82380 05301 • meetgol22@gmail.com • LinkedIn • GitHub

S U M M A R Y

Fresher MSc IT student with strong basics in Python, SQL (MySQL), and MongoDB for backend and database work. Skilled in full-stack web development using the MERN Stack and building REST APIs with Python Flask and FastAPI. Hands-on with Generative AI applications using LLMs and AI tools. Experienced with data processing using Pandas, NumPy, and Matplotlib. Comfortable working with tools like Git, GitHub, VS Code, and Jupyter. Passionate about building practical projects and eager to grow in a professional environment.

E D U C A T I O N

Master of Science in Information Technology **2025 – 2027**
Charotar University of Science and Technology (CHARUSAT) – Changa, Gujarat

Bachelor of Computer Applications (BCA) **2022 – 2025**
Lok Jagruti University (LJU) – Ahmedabad, Gujarat

S K I L L S

- Strong basics in Python, SQL (MySQL), and MongoDB for backend and database-related work.
- Proficient in MERN Stack (MongoDB, Express.js, React.js, Node.js) for full-stack web development.
- Built Generative AI applications using LLMs with LiteLLM, OpenAI, and Gemini APIs.
- Hands-on with prompt design, context handling, and basic fine-tuning concepts.
- Used Pandas, NumPy, and Matplotlib for data processing and experimentation.
- Comfortable with everyday dev tools like Git, GitHub, Jupyter, VS Code, Hugging Face, and database clients.

P R O J E C T S

CryptoBlock – Live Cryptocurrency Trading Platform **github.com/meet5301/CryptoBlock**
- Built a full-stack crypto trading platform using Python (Flask) and MongoDB with real-time price updates every 3 seconds via WebSocket (Flask-SocketIO), pulling live market data from CoinGecko and Binance APIs.
- Implemented core trading features including buy/sell order execution, stop-loss automation, SIP (Systematic Investment Plan), trade history, P&L; tracking, and multi-user wallet management.
- Developed a custom blockchain engine with Proof-of-Work mining, Merkle root calculation, transaction recording, and chain validation stored in MongoDB.
- Integrated an AI/ML monitoring module for anomaly detection, risk scoring, and suspicious transaction flagging on live trades.
- Built an interactive dashboard with real-time BTC candlestick charts, 12 live mini-charts for top coins, and a full trading modal — styled with a dark trading-terminal UI.

Tech: Python, Flask, Flask-SocketIO, MongoDB, JavaScript, HTML, CSS, CoinGecko API, Binance API, Redis, Docker

Vastra – MERN Stack Fashion E-Commerce Store **github.com/meet5301/Vastra**
- Built a full-stack fashion e-commerce store with product browsing, category filters, search, cart, wishlist, and complete checkout flow using MongoDB, Express.js, and Node.js.
- Implemented JWT-based authentication with signup, login, and profile management, plus custom middleware for role-based admin route protection.
- Designed MongoDB schemas for User, Product, and Order with embedded subdocuments and built 20+ RESTful API endpoints across auth, products, orders, and admin domains.
- Developed a separate Admin Panel with a live dashboard (orders, revenue stats), product CRUD with image upload, and order status lifecycle management.

Tech: MongoDB, Express.js, Node.js, JavaScript, HTML, CSS, JWT, REST API

IndianFoodMap – Hyperlocal Street Food Discovery Platform **github.com/meet5301/IndianFoodMap**
- Built a full-stack MERN platform for discovering street food vendors across 35+ Gujarat cities with an interactive React Leaflet map and MongoDB 2dsphere geospatial indexing for GPS-based proximity search.
- Implemented JWT authentication with bcrypt, role-based access control, and protected routes on both frontend (React Router guards) and backend (Express middleware), including a fully functional Admin Panel.

• Developed real-time messaging and notifications using Socket.io with JWT-authenticated WebSocket connections, typing indicators, and live notification badges.
• Designed RESTful APIs across 7 route groups with advanced vendor filtering, SEO-optimized slug-based pages, dynamic sitemap.xml generation, and JSON-LD structured data for Google indexability.
Tech: MongoDB, Express.js, Node.js, React 18, Vite, Tailwind CSS, Socket.io, JWT, React Leaflet, REST API

Promptrix – AI-Powered Multi-Page Website Builder github.com/meet5301/Promptrix

• Built an AI-powered website generator using Flask and the Anthropic Claude API that takes a text prompt and generates a complete, ready-to-download HTML website.
• Implemented a template system with 4 pre-designed templates (Modern, Creative, Minimal, Professional) and a full customization panel covering header, hero section, color scheme, layout, and footer settings.
• Added a real-time live preview with responsive viewport, a refine mode for follow-up edits to the generated site, and a one-click HTML ZIP download.
• Integrated user authentication, MongoDB for persistent site history, and SQLite for analytics and email queue management.
Tech: Python, Flask, Anthropic Claude API, MongoDB, SQLite, HTML, CSS, JavaScript

C E R T I F I C A T I O N S

• AWS Academy Graduate – Cloud Architecting (AWS, 60 Hours)
• Machine Learning with Python – IBM (Coursera)
• Databases and SQL for Data Science – IBM (Coursera)
• Introduction to Cloud Computing – IBM (Coursera)
• Prompt Engineering for ChatGPT – Vanderbilt University (Coursera)
