MEET GOL

DATA ENGINEER • MSc IT STUDENT

Ahmedabad, Gujarat, India | +91 82380 05301 | meetgol22@gmail.com | LinkedIn | GitHub

SUMMARY

Data Engineer with hands-on experience building end-to-end ETL pipelines and warehouse schemas in production-style projects — including a multi-tenant Bronze-to-Gold pipeline processing client data into Power BI-ready KPIs. Strong in Python, SQL, and dimensional modeling (star/snowflake schema), with AWS Cloud Architecting certification and active expansion into PySpark and Airflow for distributed and orchestrated pipelines.

EDUCATION

Master of Science in Information Technology (MSc IT) 2025 – 2027
Charotar University of Science and Technology (CHARUSAT), Changa, Gujarat

Bachelor of Computer Applications (BCA) 2022 – 2025
Lok Jagruti University (LJU), Ahmedabad, Gujarat

TECHNICAL SKILLS

- Data Engineering: Python, SQL, ETL, ELT, Data Warehousing, Data Lakehouse, Data Modeling, Apache Spark, PySpark
- Tools & Cloud: Git, GitHub, Azure Data Factory, Azure Event Hubs, Databricks, Basic CI/CD
- Web Development: React.js, JavaScript, Node.js, MongoDB

PROJECTS

Zenvix — Enterprise Data Management & BI Service Platform

Technologies *Databricks, Apache Spark (PySpark), Spark SQL, Python, Azure Event Hubs, React.js, TypeScript, FastAPI, Power BI, JWT*

- Reduced manual data-cleaning effort by an estimated 70% by building modular Bronze-to-Gold ETL pipelines in PySpark on Databricks, with automated deduplication, type correction, and validation across multi-tenant client datasets.
- Enabled event-driven ingestion by streaming client upload and ingestion events through Azure Event Hubs into Databricks, landing raw multi-tenant data in the Bronze layer for downstream processing.
- Enabled self-service analytics for 6 business domains (Sales, Profit, Inventory, Customer, Regional, Executive) by designing a Snowflake Schema Gold layer with Spark SQL and exposing it through FastAPI endpoints and SQL views consumed directly by Power BI.
- Secured multi-tenant data isolation across the full pipeline by implementing JWT-based authentication with role-based access control, enforced at the API layer for admin vs. client roles.
- Cut client onboarding time by building a self-serve upload-to-dashboard flow — file upload, Event Hubs-triggered ETL runs on Databricks, and status polling — through a React + TypeScript admin console and client portal.

IndianFoodMap — Hyperlocal Street Food Discovery Platform

Technologies *React.js, Node.js, MongoDB, MongoDB Atlas, JavaScript*

- Enabled location-based vendor discovery across 35+ Gujarat cities by implementing geospatial indexing in MongoDB Atlas.
- Delivered a full-stack discovery platform by building a React.js frontend integrated with MongoDB-backed filtering and data models.

CERTIFICATIONS

- AWS Academy Graduate — Cloud Architecting (60 Hours)
- Databases and SQL for Data Science — IBM (Coursera)
- Introduction to Cloud Computing — IBM (Coursera)
